ABSTRACT

PetCare is a full-stack web application built with the MERN stack (MongoDB, Express.js, React, and Node.js) to streamline pet care management and community stray animal support. It enables users to track pet health records, vaccinations, appointments, and care schedules while offering secure authentication via JWT and responsive UI with React hooks.

1.1 Problem Background

Imagine you're a busy urban pet parent in a bustling Indian city like Mumbai or Delhi. Your furry best friend—maybe a playful Labrador or a loyal Indie—needs reliable daycare while you're at work, but finding a trustworthy creche feels like a treasure hunt. Apps exist for bookings, but they're scattered, unreliable, or just don't deliver that peace of mind. You worry: Is the place clean? Will they handle allergies or emergencies? Meanwhile, heart wrenching scenes unfold on the streets—stray dogs scavenging in the rain, injured and alone, their eyes pleading for a chance.

Stray welfare hits hard too. In India, millions of these street-smart survivors roam our cities, facing hunger, traffic dangers, and diseases. Good-hearted folks spot a gentle pup and want to help—report it for feeding, medical aid, or adoption—but where do they turn? Fragmented services mean one platform might handle creche slots, another lists vague adoption options, and nothing connects the dots for community reporting or chats. Legal hurdles pile on: paperwork for adoption is a nightmare, supply of loving homes doesn't match the demand, and isolated strays stay overlooked.

It's a cycle of frustration and missed connections—pets left without care, strays without hope, and communities siloed instead of united. Petcare steps in as that warm, all-in-one friend: book creches seamlessly, post stray sightings with photos for quick community input, and spark responsible rehoming through comments and interactions. All mobile-friendly, making it easy for anyone to join the kindness chain right from their phone.

1.2 Objective of the Project

- Build a full-stack web app which bridges pet creches with owners.
- Easy searching, comparing and bookings of creches.
- Create a vibrant, friendly hub for pet lovers to connect and share.
- Build a thriving community where pet lovers unite to post about their pets, share stories, tips.
- Drive adoptions and welfare via interactive user comments on stray animal posts. •
Boost creches bookings by 30-50%

1.3 Proposed Solution

- **Unified Full-Stack Web App:** Bridges pet creches with owners via intuitive search, comparison, and booking; doubles as a community hub for stray welfare.
- **Core User Features:**
 - Secure login via JWT authentication.
 - Browse filtered grids (e.g., by location, pet size).
 - Book creche services directly.
 - Comment on posts for inquiries, fostering real-time community interaction.
- **Backend Tech Stack:**
 - JSON files for lightweight data storage for users.
 - Cloudinary for secure cloud-based image uploads.
 - Real-time comments enabled on community posts.
- **Major Components:**
 - Authentication module.
 - Postings/listings engine with integrated comments.
 - Booking system.
 - Admin dashboard.
- **Key Benefits:** Seamless rehoming and service matching without formal centre liabilities.

1.4 Key Features or Functionality

- **JWT Authentication:** Secure logins, user profiles with pet details.
- **Creche Bookings:** Calendars for availability, integrated payments.
- **Stray Postings:** Mobile photo uploads via Cloudinary, health/location details.
- **Search & Grids:** Filters (location, size, ratings), moderated public listings.
- **Real-time Comments:** Community interaction on stray posts for inquiries/adoption.
- **Admin Dashboard:** Manage users, approve posts, monitor bookings.

1.5 Technology / Method Used

- **Frontend:** React.js: Dynamic, responsive UI with hooks (useState, useEffect, useContext) for state management, routing, and forms. Vite used as the build tool for fast development.
- **Backend:** Express.js & Node.js: Scalable RESTful APIs for authentication, CRUD operations, JWT-based security, and community post management.
- **Database:** JSON Files: Lightweight data storage using Node.js built-in fs module for users, creche listings, bookings, and community posts stored in users.json, locationinfo.json, and posts.json.
- **Authentication:** JWT (JSON Web Tokens): Secure session management with bcrypt password hashing for safe user registration and login.
- **Media:** Cloudinary: Secure photo uploads and optimizations for creche images, profile pictures, and community post photos.
- **Security:** bcrypt for password hashing and Owner Secret Key system to prevent unauthorized creche owner registrations.

Expected Outcomes & Benefits

- **Creche Utilization Boost:** Increase local bookings by 30-50% through targeted search, comparisons, and real-time availability.
- **Stray Rehoming Impact:** Enable 100+ strays rehomed annually via photo posts, detailed info, and interactive comments.
- **Owner Stress Reduction:** Seamless bookings eliminate fragmented app hunting and reliability worries.
- **Interactive Community:** Fosters rehoming through user comments, inquiries, and direct connections.
- **Scalable Growth:** Verified listings build trust, driving organic user expansion and engagement.
- **Enhanced Pet Welfare:** Real-time stray reporting connects communities with feeders/vets faster.
- **Economic Uplift:** More creche revenue supports local businesses and job creation.

1.7 Original Contribution Statement

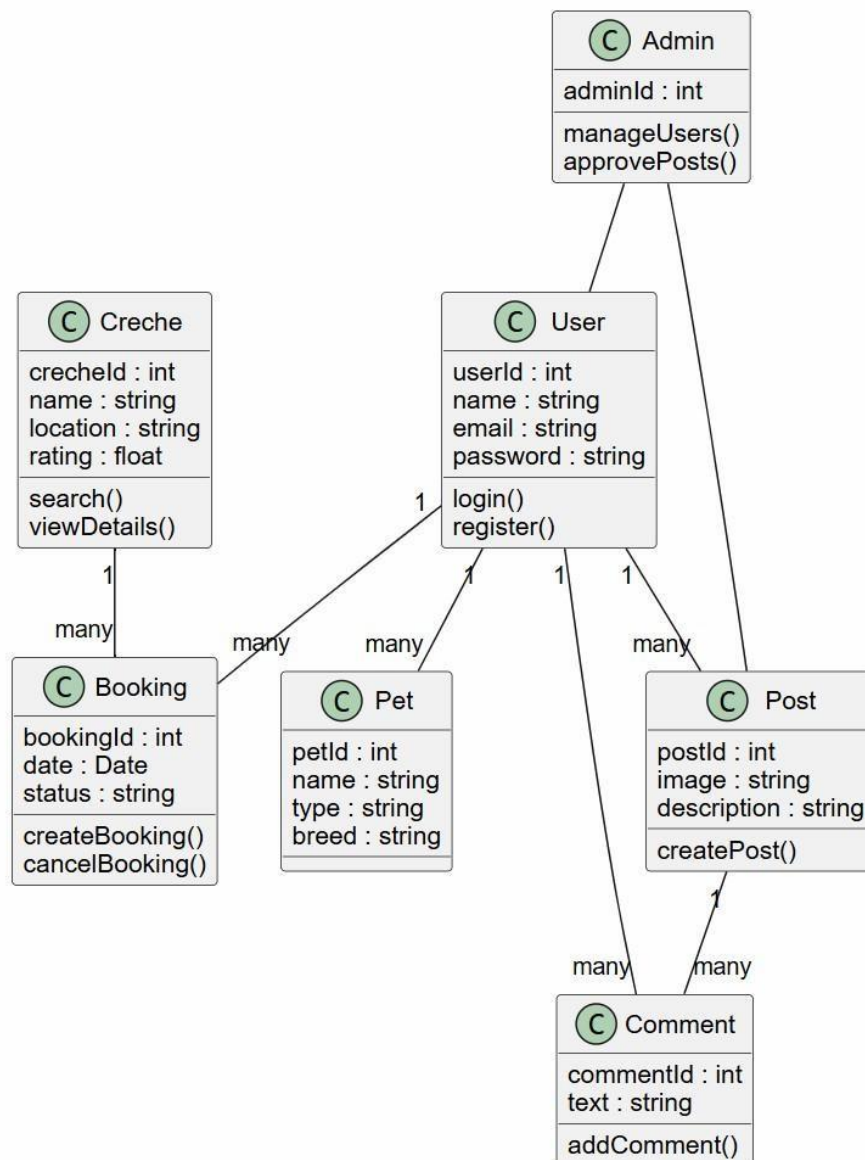

The originality of this project lies in developing the first platform to integrate creche booking services with a community space for pet lovers to connect and promote stray animal adoptions.

Future enhancements may include:

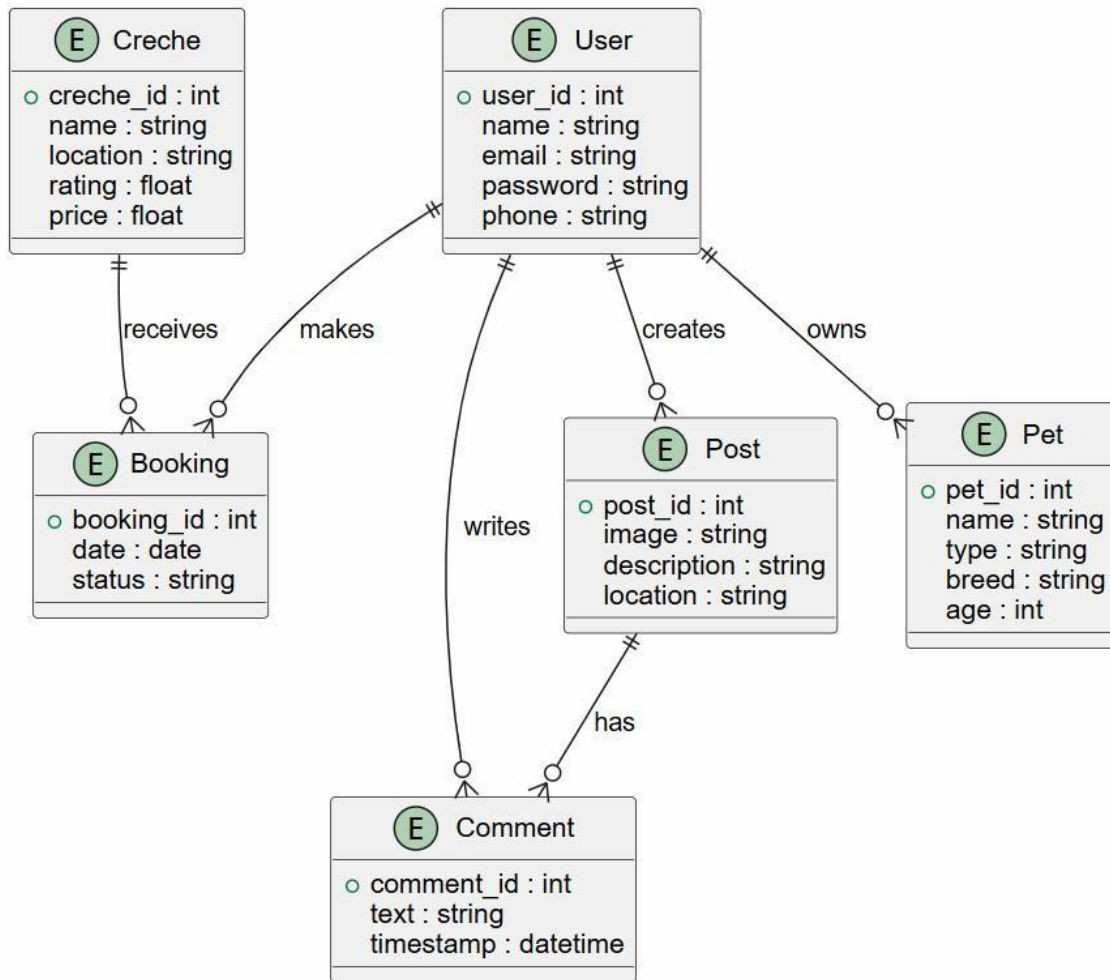

- AI-based creche recommendation system.
- Video tour integration for creches.
- Online payment gateway
- Pet health record upload/download
- Mobile application support
- Automated booking reminder notifications

These enhancements will further improve owner convenience and pet welfare efficiency.
